1. General Description

1.1 Overview

GDEQ031T10 is a reflective electrophoretic display module on an active matrix TFT substrate, The diagonal length of the active area is 3.1" and contains 240x320 pixels. The panel is capable of displaying 1-bit black, and white images depending on the associated lookup table used. The circuitry on the panel includes an integrated gate and source driver, timing controller, oscillator, DC-DC boost circuit, and memory to store the frame buffer and lookup tables, and additional circuitry to control VCOM and border settings.

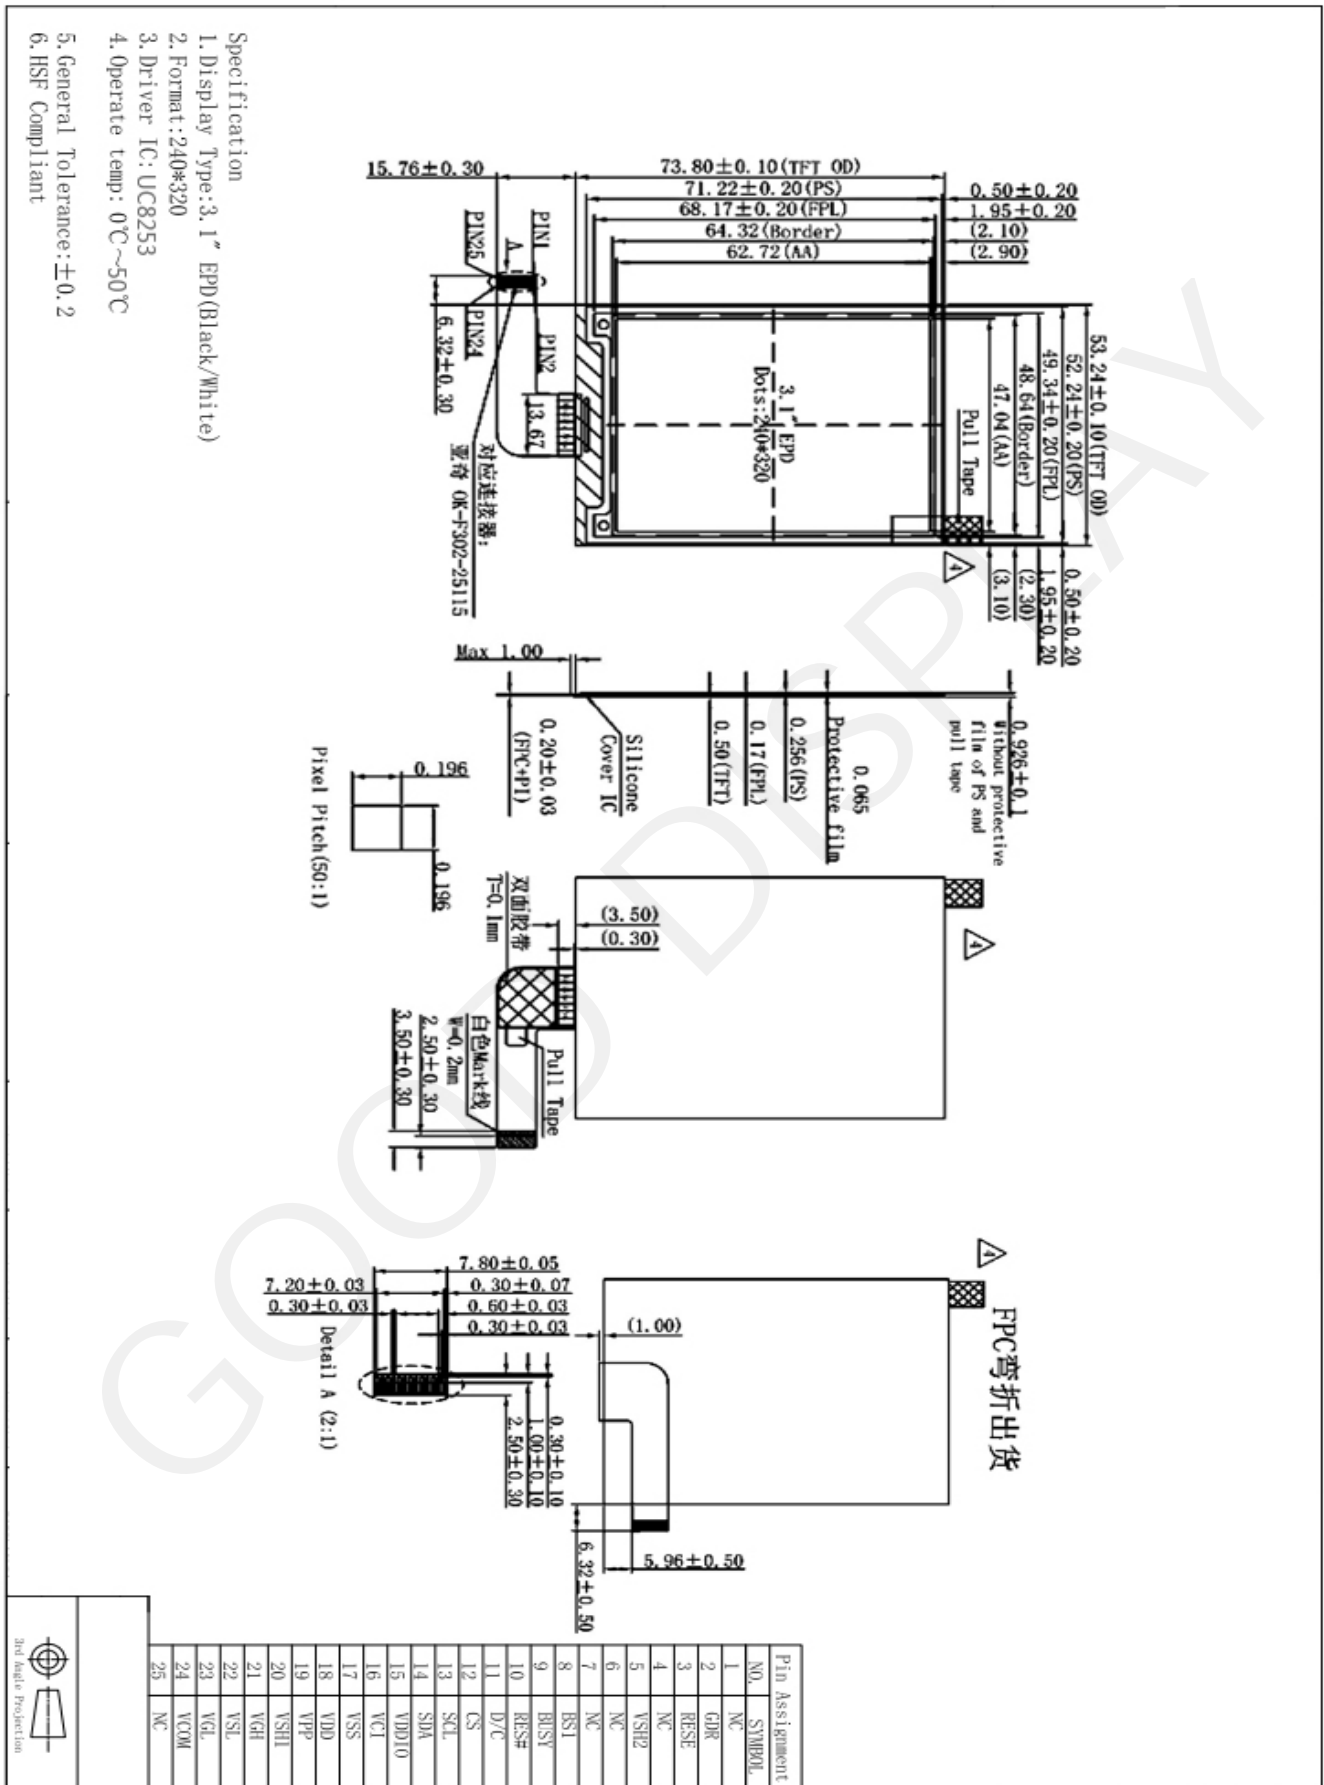

1.2 Features

- Ultra wide viewing angle
- Ultra low power consumption
- I2C Signal Master Interface to read external temperature sensor.
- On chip display RAM
- Interface: 4-Wire SPI or 3-Wire SPI
- Wide range of operating temperature: 0 to 50
- Wide range of storage temperature: -25 to 60
- High reflectance and contrast TFT electrophoretic.

1.5 Module Interface

| PIN NO. | PIN NAME | DESCRIPTION |
|---------|----------|---|
| 1、 4 | NC | No Connection |
| 2 | GDR | This pin is N-Channel MOSFET gate drive control pin. |
| 3 | RESE | Current Sense Input for the control loop |
| 5 | VSH2 | This pin is Positive Source driving voltage,VSH2 Connect a stabilizing capacitor between VSH2 and VSS in the application circuit. |
| 6、 7 | NC | No Connection |
| 8 | BS1 | This pin is for selecting 3-wire(H active) or 4-wire(L active) SPI interface. |
| 9 | BUSY | Driver busy flag. |
| 10 | RES# | This pin is reset signal input (Active Low). |
| 11 | D/C | This pin is Data/Command control pin connecting to the MCU |
| 12 | CS | This pin is the chip select input connecting to the MCU. |
| 13 | SCL | This pin is serial clock pin for interface. |
| 14 | SDA | This pin is serial data pin for interface. |
| 15 | VDDIO | Power input pin for the Interface. |
| 16 | VCI | Power input pin for the chip. |
| 17 | VSS | Ground |
| 18 | VDD | Core logic power pin VDD. |
| 19 | VPP | Power Supply for OTP Programming |
| 20 | VSH1 | This pin is Positive Source driving voltage,VSH1 Connect a stabilizing capacitor between VSH1 and VSS in the application circuit. |
| 21 | VGH | This pin is Positive Gate driving voltage.Connect a stabilizing capacitor between VGH and VSS in the application circuit. |
| 22 | VSL | Negative Source driving voltage |
| 23 | VGL | This pin is Negative Gate driving voltage. |
| 24 | VCOM | VCOM driving voltage |
| 25 | NC | No Connection |

1.6 Matched Development Kit

Our Development Kit designed for SPI E-paper Display aims to help users to learn how to use E-paper Display more easily. It can refresh black-white E-paper Display and three-color (black, white and red/Yellow) Good Display ' s E-paper Display. And it is also added the functions of USB serial port, Raspberry Pi and LED indicator light ect.

DESPI Development Kit consists of the development board and the pinboard. More details about the Development Kit, please click to the following link:

2. Environmental

2.1 HANDLING, SAFETY AND ENVIRONMENTAL REQUIREMENTS

| WARNING |
|--|
| The display glass may break when it is dropped or bumped on a hard surface. Handle with care. Should the display break, do not touch the electrophoretic material. In case of contact with electrophoretic material, wash with water and soap. |

| CAUTION |
|--|
| The display module should not be exposed to harmful gases, such as acid and alkali gases, which corrode electronic components. |
| Disassembling the display module can cause permanent damage and invalidate the warranty agreements. |
| IPA solvent can only be applied on active area and the back of a glass. For the rest part, it is not allowed. |

Observe general precautions that are common to handling delicate electronic components. The glass can break and front surfaces can easily be damaged.

Moreover the display is sensitive to static electricity and other rough environmental conditions.

| Mounting Precautions | |
|-----------------------------|--|
| (1) | It`s recommended that you consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. |
| (2) | It`s recommended that you attach a transparent protective plate to the surface in order to protect the EPD. Transparent protective plate should have sufficient strength in order to resist external force. |
| (3) | You should adopt radiation structure to satisfy the temperature specification. |
| (4) | Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the PS at high temperature and the latter causes circuit break by electro-chemical reaction. |
| (5) | Do not touch, push or rub the exposed PS with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of PS for bare hand or greasy cloth. (Some cosmetics deteriorate the PS) |
| (6) | When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach the PS. Do not use acetone, toluene and alcohol because they cause chemical damage to the PS. |
| (7) | Wipe off saliva or water drops as soon as possible. Their long time contact with PS causes deformations and color fading. |
| Product specification | The data sheet contains final product specifications. |

Limiting values

Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information

Where application information is given, it is advisory and does not form part of the specification.

All The specifications listed in this document are guaranteed for module only. Post-assembled operation or component(s) may impact module performance or cause unexpected effect or damage and therefore listed specifications is not warranted after any Post-assembled operation.

2.2 Reliability test

| NO | Test items | Test condition | QUANTITY |
|----|--|--|----------|
| 1 | Low-Temperature Storage | T = -25°C , low temperature film T= -30°C; White screen state, for 240h. | 5pcs |
| 2 | Low-Temperature Operation | T = 0°C, 240 h; Put the product into the experimental procedure, run it in the temperature box, and check it every 24 hours. | 5pcs |
| 3 | High-Temperature Operation | T = 50°C, RH = 35%, 240 h; Put the product into the experimental procedure, run it in the temperature box, and check it every 24 hours. | 5pcs |
| 4 | High-Temperature Storage | T=60°C, RH=35%; White screen state, for 240h. | 5pcs |

| 8 | ESD Contact discharge | ±200V, Test 5 point; Each point discharge 10 times. Time interval is not less than 1 second. | 5pcs |

ESD test location

Test and measurement conditions

After the end of the experiment, the sample was taken out of the temperature chamber, and stood at room temperature for 1h, and then the sample was inspected for appearance, function and optical inspection.

Criteria for qualification (pass the test if all qualified) :

- (1) The product can be normal refresh.
- (2) There are no new point defects or line defects in the display screen.
- (3) No discoloration, blurred handwriting and barcode can be read on the complex screen.

3. ELECTRICAL CHARACTERISTICS

3.1 ABSOLUTE MAXIMUM RATINGS

| ITEM | SYMBOL | MIN | MAX | UNIT | REMARK |
|----------------------|---------|------|-----------|------|--------|
| Logic supply voltage | VCI/VDD | -0.3 | +6.0 | V | - |
| I/O supply voltage | VDDIO | -0.3 | +6.0 | | |
| OTP Program voltage | VPP | -0.3 | +8.5 | V | - |

| Operating Temp. | Top | 0 | +50 | °C | - |
| Storage Temp | Tstg | -25 | +60 | °C | - |

Note (1): All of the voltages are on the basis of "VSS = 0V".

Note (2): Maximum ratings are those values beyond which damages to the device may occur. Functional operation should be restricted to the limits in the Panel DC Characteristics tables.

3.2 DC Characteristics

The following specifications apply for: VSS=0V, VCI=3.3V, TOPR =25°C.

| Parameter | Symbol | Condition | Applicable pin | Min. | Typ. | Max. | Unit |
|---|-----------------------|---|----------------|-----------|------|-----------|------|

| Sleep mode current | I _{slp_VCI} | VCI=3.3V DC/ DC OFF No clock No output load Ram data retain | VCI | - | 40 | - | uA |
| Deep sleep mode current | I _{dslp_VCI} | VDDD OFF | VCI | - | 1 | 5 | uA |

Note: The VPP, VCI, VDDIO input must be kept in a stable value; ripple and noise are not allowed.

Notes:

1) Refresh time: the time it takes for the whole process from the screen change to the screen stabilization.

2) The difference between different refresh methods:

Full refresh: The screen will flicker several times during the refresh process;

Fast Refresh: The screen will flash once during the refresh process;

Partial refresh: The screen does not flicker during the refresh process.

Note: During the fast refresh or partial refresh of the electronic paper, it is recommended to add a full-screen refresh after 5 consecutive operations to reduce the accumulation of afterimages on the screen.

3.3 Panel DC Characteristics (Driver IC Internal Regulators)

The following specifications apply for: VSS=0V, VCI=3.3V, TOPR =25°C.

| Parameter | Symbol | Condition | Applicable pin | Min. | Typ. | Max. | Unit |
|--------------------------------|--------|-----------|----------------|------|------|------|------|

| Positive Source output voltage | VSH | - | S0~S239 | - | +16 | - | V |
| Negative Source output voltage | VSL | - | S0~S239 | - | -16 | - | V |
| Positive gate output voltage | Vgh | - | G0~G319 | -0.3 | - | 22 | V |
| Negative gate output voltage | Vgl | - | G0~G319 | -22 | - | 0.3 | V |

3.4 Optical Specification

Measurements are made with that the illumination is under an angle of 45 degree, the detection is perpendicular unless otherwise specified.

3.6 Functional Specification and Application Circuit

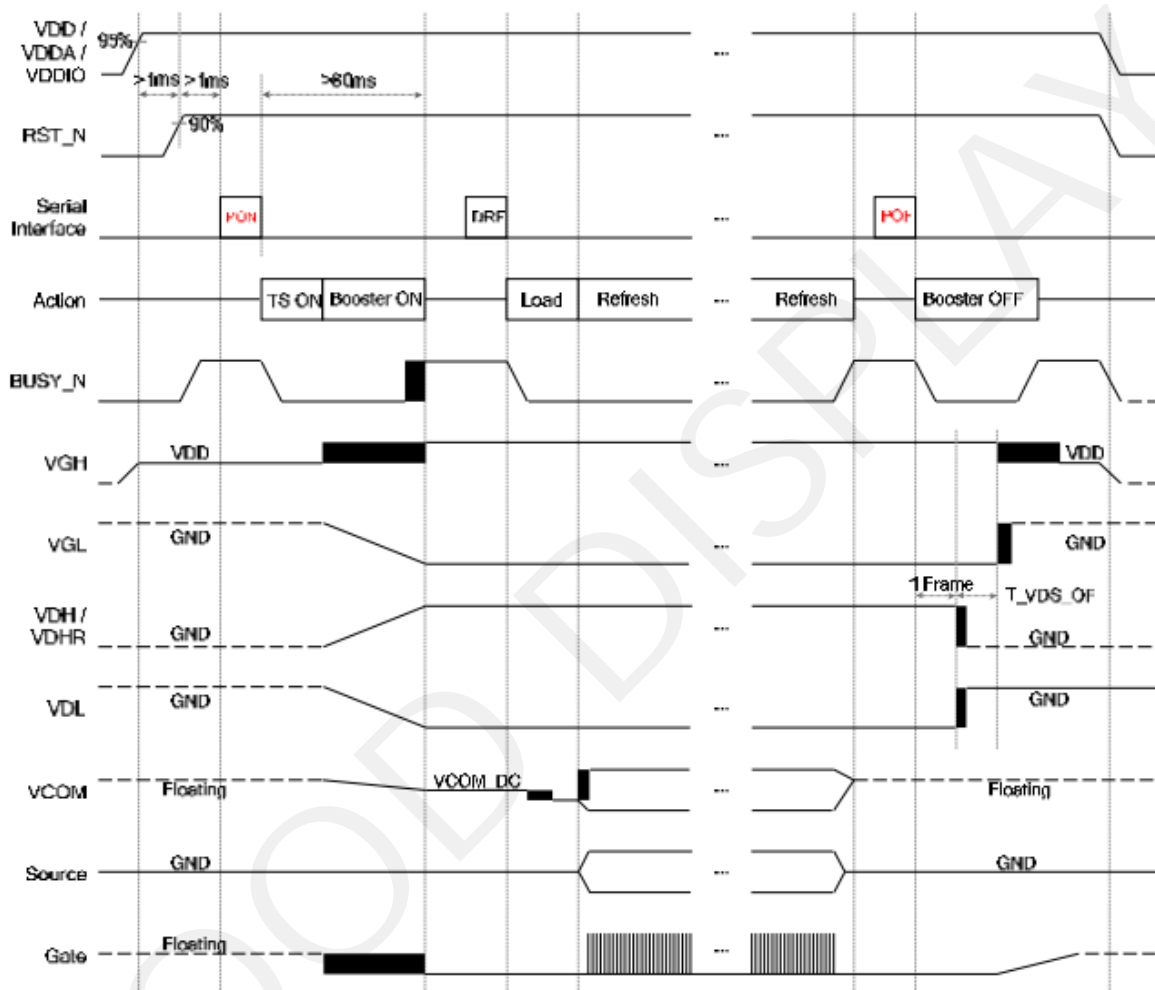

3.6.1 Operation Flow and Code Sequence

General operation flow to drive display panel

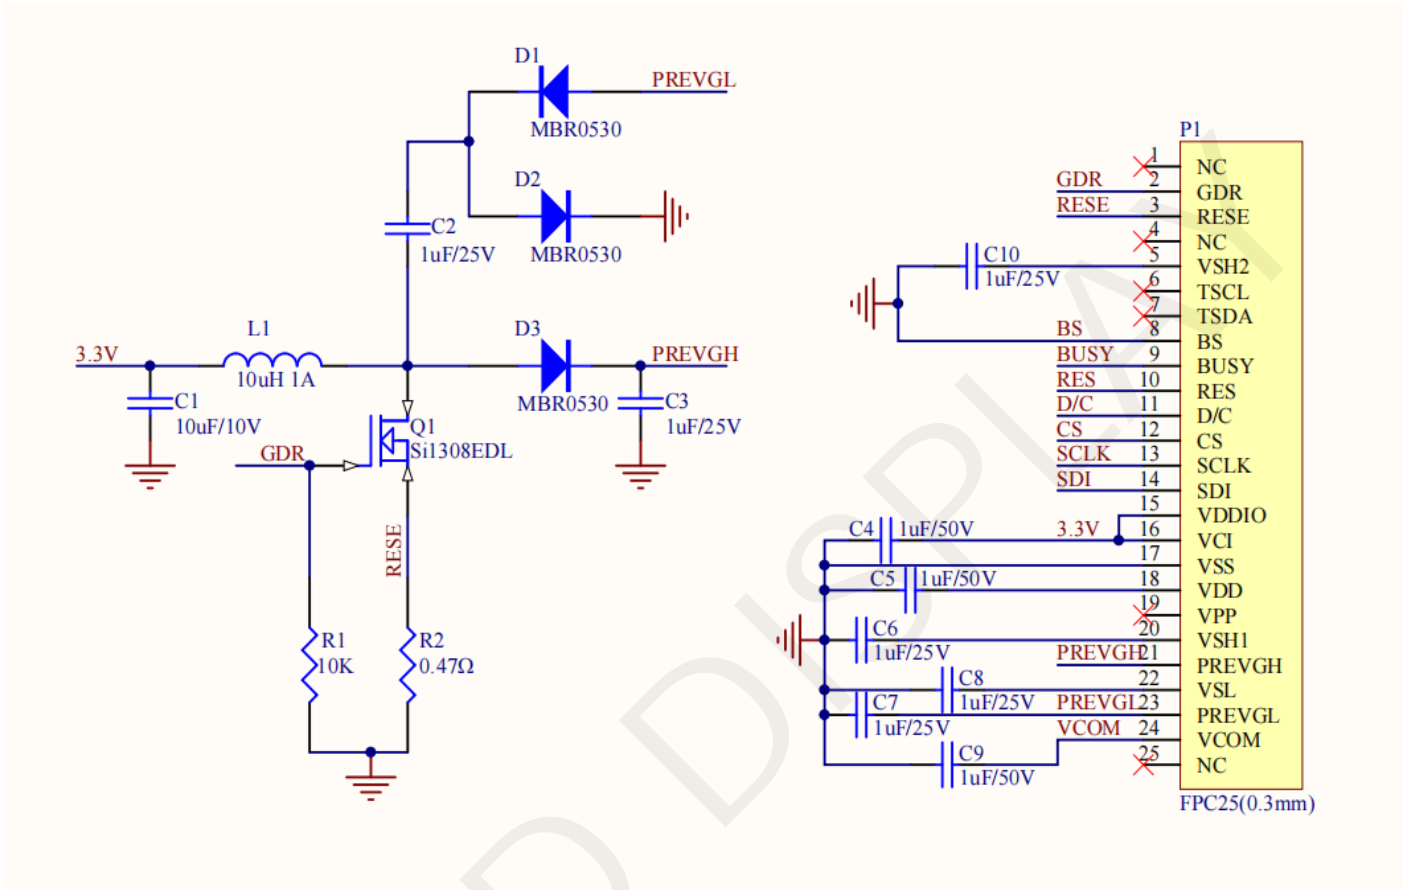

3.6.2 Power ON/Power OFF Sequence

1. Temperature sensor will be activated automatically for one-time sensing before enabling booster.
2. After refreshing display, VCOM will be set to floating automatically.
3. In OTP mode (REG=0), the LUT in OTP will be copied to register automatically after the DSP/DRF command.
4. After RST_N rising, the waiting time for internal initial processing, greater than 1mS, is necessary. Any commands transmitted to chip during this time will be ignored.

NOTE:1、The inner cartoster carton must be sealed with adhesive tape.

- 2、Fill up the gap with empty tray.
- 3、If the customer has special needs with the RoHS making, the inner carton and master carton need adhesive new RoHS marking at .
- 4、Packaging materials are not recommended for recycling.

6. Precautions

- (1) Do not apply pressure to the EPD panel in order to prevent damaging it.
- (2) Do not connect or disconnect the interface connector while the EPD panel is in operation.
- (3) Do not touch IC bonding area. It may scratch TFT lead or damage IC function.
- (4) Please be mindful of moisture to avoid its penetration into the EPD panel, which may cause damage during operation.
- (5) If the EPD Panel / Module is not refreshed every 24 hours, a phenomena known as "Ghosting" or "Image Sticking" may occur. It is recommended to refreshed the ESL /EPD Tag every 24 hours in use case. It is recommended that customer ships or stores the ESL / EPD Tag with a completely white image to avoid this issue
- (6) High temperature, high humidity, sunlight or fluorescent light may degrade the EPD panel's performance. Please do not expose the unprotected EPD panel to high temperature, high humidity, sunlight, or fluorescent for long periods of time.
